87.6 %

AISSCE

Dayawati Modi Academy, Rampur (U.P.)

2016 - 2017

CGPA 10

CERTIFICATES

Data Structures and Algorithms foundation Course on Pepcoding

Java Basic Certificate on HackerRank

PERSONAL PROJECTS

Typing Speed Calculator

- Project - [Github](#)
- A typing speed calculator using pure JavaScript
- In the calculator, words are counted once you have moved on to the next word. Errors are counted character by character within words. Punctuation is counted as part of the word that precedes it. Mistyped words are counted when you move on to the next word.
- Accuracy is counted character by character. Words per minute is updated each time you type, based on words completed and moved on from since you first started typing. If you stop in the middle of typing for a while, you will need to start a new test to get an accurate word per minute count.
- Time to completion is calculated just once, only after you have typed the number of words given in that particular typing test.

ACHIEVEMENTS

4 ★ & 1000+ Problems Solved at Leetcode

20k Global Contest Rank(1780 Rating) at Leetcode

3700 National Rank at Leetcode

Global Rank 1858 at Leetcode Weekly Contest 300

Global Rank 1862 at Leetcode Bi-Weekly Contest 80
